## **The GMPHN Encourages People Who Have Had Flu Symptoms Since Springtime to Still Get the H1N1 Vaccine**

(Keene, NH, 12/18/2009 8:05 AM) — The Greater Monadnock Public Health Network (GMPHN) is encouraging anyone who has not yet received the H1N1 vaccine to get immunized.

Many people wonder if they should still get the H1N1 vaccine if they have been sick with influenza-like illness (ILI) since the springtime.

“Unless you’ve been diagnosed with H1N1, the flu symptoms you had could have been from another virus,” said Judy Harris, R.N., MPH, who is the Director of Client Services at HCS and the GMPHN’s vaccine manager. “To protect yourself from H1N1 you still need to get the H1N1 vaccine. Even if you actually had H1N1, getting the vaccine now is fine and wouldn’t do any harm.”

Unless a RT-PCR test is conducted, there is no way to know definitively if a person with ILI actually has 2009 H1N1. The CDC recommends that people who have been sick with ILI since the springtime still get the H1N1 vaccine. Please see the following excerpt from the CDC’s Question and Answers: 2009 H1N1 Influenza Vaccine page (link: [http://www.cdc.gov/h1n1flu/vaccination/public/vaccination\\_qa\\_pub.htm](http://www.cdc.gov/h1n1flu/vaccination/public/vaccination_qa_pub.htm) last updated 12/17/09 at 2:30 PM ET).

## ***Prior Illness***

### ***Should I get vaccinated against 2009 H1N1 if I have had flu-like illness since the Spring of 2009?***

*The symptoms of influenza (flu-like illnesses) are similar to those caused by many other viruses. Even when influenza viruses are causing large numbers of people to get sick, other viruses are also causing illnesses. Specific testing, called “RT-PCR test,” is needed in order to tell if an illness is caused by a specific influenza strain or by some other virus. This test is different from rapid flu tests that doctors can do in their offices. Since most people with flu-like illnesses will not be tested with RT-PCR this season, the majority will not know whether they have been infected with 2009 H1N1 flu or a different virus.*

<http://co.cheshire.nh.us/PublicHealth/>

*Therefore, if you were ill but do not know if you had 2009 H1N1 infection, you should get vaccinated if your doctor recommends it. So, most people recommended for 2009 H1N1 vaccination should be vaccinated with the 2009 H1N1 vaccine regardless of whether they had a flu-like illness earlier in the year. If you have had 2009 H1N1 flu, as confirmed by an RT-PCR test, you should have some immunity against 2009 H1N1 flu and can choose not to get the 2009 H1N1 vaccine. However, vaccination of a person with some existing immunity to the 2009 H1N1 virus will not be harmful. For more information on flu tests, see [Influenza Diagnostic Testing During the 2009-2010 Flu Season](#).*

*Any immunity from 2009 H1N1 influenza infection or vaccination will not provide protection against seasonal influenza. All people who want protection from seasonal flu should still get their seasonal influenza vaccine.*

It is important that people get the H1N1 vaccine because health officials have stated there is a possibility of a third wave of H1N1 this winter. The CDC states that "A flu vaccine is the first and most important step in protecting against flu infection." (<http://www.cdc.gov/h1n1flu/qa.htm>) In addition to getting the H1N1 vaccine, people should continue to practice other methods of prevention (see <http://www.cdc.gov/h1n1flu/qa.htm> "What can I do to protect myself from getting sick?")

On December 17, 2009, the state of New Hampshire announced the move to Phase IV (general population) of the NH DHHS H1N1 vaccine distribution plan. All New Hampshire residents ages 6 months and older are now eligible to receive the H1N1 vaccine.

The Greater Monadnock Public Health Network (GMPHN) will be holding a series of free public H1N1 vaccine clinics throughout the greater Monadnock region in the following weeks. People who have not yet received the vaccine are encouraged to come to a free clinic to be immunized. Both nasal mist and injectable vaccine will be available at these clinics. Parents of children ages 6 months – 3 years should contact their pediatricians or Judy Harris at HCS at 352-2253 to receive the vaccine. Parents of children less than 10 years of age should remember that their child will need a booster H1N1 vaccine 28 days after receiving the first H1N1 vaccine.

The Greater Monadnock Public Health Network is also working with school nurses and superintendents for SAUs 1, 24, 29, 38, 47, 60 and 87 to provide school-based clinics for students. School-based clinics are designed for students and staff (and in some cases parents) but are not open to the general public. Schools will notify parents of future school-based clinics. Parents can also go to the NH DHHS H1N1 Influenza Resource website's "Where Can I Get My H1N1 Vaccine?" page (link: <http://www.nh.gov/h1n1/vaccine.htm>) and then click on the link for List of School H1N1 clinics. They can also search on [www.google.com/flushot](http://www.google.com/flushot)

The Greater Monadnock Public Health Network is committed to reaching the public with timely information through a variety of media channels. Press releases and public services announcements about H1N1 vaccine clinics and other pertinent public health information will be sent regularly to local newspapers, radio stations and television stations.

- CMC/DHK H1N1 Flu vaccine info: 603-354-5405 Option #2
- CMC/DHK Pediatric Flu Clinic vaccine info: 603-354-6665
- 603-354-5454 Ext. 3030 – direct line for Amanda N. Gaspard, MPH (Emergency Preparedness Coordinator for the GMPHN)
- 603-354-6836 – main GMPHN line

All H1N1 vaccines are offered in accordance with New Hampshire's vaccination distribution plan (See: [www.nh.gov/H1N1](http://www.nh.gov/H1N1))

Both the H1N1 and seasonal vaccines have been shown to be safe. The only people who should not get a flu vaccine are those who are allergic to eggs, anyone who has had a serious reaction to a flu shot in the past, anyone with a history of Guillain-Barre syndrome, and children younger than 6 months old. Even if you have already had flu-like symptoms you should still be immunized. There are many different strains of influenza. You may or may not have had the strain the vaccine is intended to protect against. It's also possible to get sick again.

If you think you have the flu, the best place for you to be is at home. Take the time to let the illness run its course. Don't rush your recovery. The best way to ensure your health, as well as your family's and friends' wellness, is to take care of yourself.

Cheshire Medical Center/Dartmouth-Hitchcock Keene  
580 Court Street  
Keene, NH 03431  
603-354-6836

<http://co.cheshire.nh.us/PublicHealth/>

- Stay home from work or school until your fever has been gone for least 24 hours without the use of fever reducing medications.
- Stay away from others.
- Get plenty of rest.
- Drink clear fluids.
- Wear a face mask if you have to go in the public.
- Drink from your own container.

If you are pregnant or have a health condition such as diabetes, heart disease, asthma, or emphysema, check with your health care provider and ask if you need any special care.

Anyone who gets the flu should watch for signs that the illness is getting worse. Call your doctor if you experience or observe any of these warning signs.

o Adults:

- Shortness of breath or respiratory distress
- Fever greater than 100 degrees for more than 3 days
- Chest or abdominal pain
- Lightheadedness
- Disorientation or confusion

o Children:

- Difficulty breathing
- Blue skin color
- Unable to keep liquids down
- Extreme drowsiness, listlessness, or sluggishness

These warning signs could mean a person is developing complications to the flu, which should be taken seriously.

For more information, treatment resources, or other assistance, call 2-1-1 (in NH) or 1-866-444-4211 (all other states) any time of day or visit [www.211nh.org](http://www.211nh.org). You can also visit websites for Cheshire Medical Center/Dartmouth-Hitchcock Keene (CMD/DHK) ([www.cheshiremed.org](http://www.cheshiremed.org)) or the Greater Monadnock Public Health Network (GMPHN) (<http://co.cheshire.nh.us/PublicHealth/>). CMC/DHK and GMPHN work together to plan and protect public health and safety in concert with the New Hampshire Department of Health and Human Services ([www.nh.gov/h1n1](http://www.nh.gov/h1n1)). The GMPHN is housed by Cheshire Medical Center/Dartmouth-Hitchcock Keene and in collaboration with Cheshire County is financed under an agreement with the State of New Hampshire, Department of Health and Human Services, and Division of Public Health Services with funds provided by the Centers for Disease Control and Prevention.

Together CMC/DHK and GMPHN will offer updates on flu season preventions and precautions for the Monadnock Region. For flu clinic information any time of day or night, call Cheshire Medical/Center Dartmouth-Hitchcock Keene's information lines.
